

# MOHAMMED NUH

Front - End React Developer

## ABOUT ME

I'm currently pursuing a Bachelor of Computer Applications degree from Amity Online University and have developed a strong interest in frontend React development, web design, and UI/UX. I'm passionate about building responsive, user-friendly interfaces and bringing ideas to life through clean, functional code. Alongside my studies, I run a content channel called Rapid Code where I simplify complex web development topics into short, engaging videos for beginners. I enjoy experimenting with the React framework for frontend logic and interaction, and exploring design systems using Bootstrap and Tailwind CSS to craft modern, visually appealing web interfaces.
